

Adoptium

Project Management Committee

Agenda & Minutes

“The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project’s charter.” [\[ref\]](#)

Date: 2025-April-16

Agenda:

- Approval of [minutes](#) of the March 26th meeting.
- Approval for the [statement](#) of the April 2nd meeting.
- Approval for the [statement](#) of the April 9th meeting.
- Review of outstanding actions.
- Review of [GitHub issues flagged for PMC agenda](#)
 - [Bug]: CVE-2024-8176 in alpine images ([containers#745](#))
 - [JDK 24] Provide JMODs as a separate download for deployment tool compatibility ([adoptium-support#1271](#))
- Release blocker for AIX JDK24u - cherry pick fix discussion
 - 8353053: (fs) Add support for UserDefinedFileAttributeView on AIX ([openjdk/jdk24u#180](#))
- April CPU release (24.0.1, 21.0.7, 17.0.15, 11.0.27, 8u) status update
 - Release champion: Scott Fryer
 - Source code tag April 15th
- Update on GHSA-xrvg-mgj7-p5wh.
- AoB
 - Request PMC help to add comments to release blog issue / <https://github.com/adoptium/adoptium.net/issues/3438> for ‘new & notable’
 - Temurin email re: Eclipse Foundation yearly release process

Action items:

Date	Description	Status
2025-03-26	ACTION: Scott to describe the technical overhead of separating the package file naming from the installation path management (installer#1128).	Completed

Attendees

- ☒ George Adams
- ☐ Stewart Addison
- ☐ Carmen Delgado (guest)
- ☒ Tim Ellison
- ☒ Scott Fryer
- ☒ Severin Gehwolf
- ☒ Shelley Lambert
- ☒ Andrew Leonard
- ☐ San Hong Li (apologies)
- ☐ John Oliver
- ☐ Martijn Verburg
- ☒ Lan Xia

Meeting called to order at 14:05 BST

Minutes:

- Approval of [minutes](#) of the March 26th meeting.
 - Minutes were approved.
- Approval for the [statement](#) of the April 2nd meeting.
- Approval for the [statement](#) of the April 9th meeting.
 - Both statements were approved.
- Review of outstanding actions.
 - Action is completed, as described in the issue.
- Review of [GitHub issues flagged for PMC agenda](#)
 - [Bug]: CVE-2024-8176 in alpine images ([containers#745](#))
 - i. Reminder that the images are created as official builds by Docker, and we are dependent upon them refreshing the underlying base images.
 - ii. Ubuntu-based images tend to be kept up to date at Docker, but Alpine not so much.
 - iii. The project does not have capacity to build the images ourselves at the moment, which would be the ideal solution. However, we could pin dependencies to make them explicit, and have an action that regularly checks the dependencies are up to date.

- iv. Docker will rebuild when the dockerfile changes. Discussion of having a “build version” variable in the dockerfile to force a rebuild at Docker rather than changing pinned dependency hashes.
 - v. George will ping maintainers to ask for a rebuild in this case, and Tim will update the issue to let the reporters know what is happening.
- [JDK 24] Provide JMODs as a separate download for deployment tool compatibility ([adoptium-support#1271](#))
 - i. New (JDK24+) builds no longer contain the JMODs by default in order to reduce the download size. However, a specific use case has been identified by a Temurin user who is cross-linking to a different platform and therefore requires the JMODs accessible for the target platform.
 - ii. This case is a small set of users with a bespoke use case. We plan to support this by having the JMODs available as a separate download for those who require them.
 - 1. This would be the JMODs only. Not a full JDK with the JMODs.
 - 2. Discussion of whether this would be a separate RPM package. Conclusion that it would be a developer archive and not an installable package.
 - 3. Noted that it would require an update to the API etc. No plan to put a link to the JMOD archive download on the website.
 - 4. Severin has some code in development to support this enhancement.
- Release blocker for AIX JDK24u - cherry pick fix discussion
 - 8353053: (fs) Add support for UserDefinedFileAttributeView on AIX ([openjdk/jdk24u#180](#))
 - i. There was a poll on the PMC slack channel to determine if the patch should be taken.
 - ii. Sxa not available to describe the outcome. We will continue the discussion in the next PMC meeting.
- April CPU release (24.0.1, 21.0.7, 17.0.15, 11.0.27, 8u) status update
 - Release champion: Scott Fryer
 - Source code tag April 15th
 - Builds are underway. Nothing to report at the moment.
 - All five versions started at once.
 - The automated TCK runs are not ready to be deployed in this release - beyond auto-manuals.
- Update on GHSA-xrvg-mgj7-p5wh.
 - Nothing to report this week.
- AoB
 - Request PMC help to add comments to release blog issue / <https://github.com/adoptium/adoptium.net/issues/3438>
 - i. All PMC members asked to make a note of new and notable changes in this release that can be added to the release notes.
 - ii. Eclipse will be putting out a notification about this month's release.
 - Temurin email re: Eclipse Foundation yearly release process.
 - i. Shelley noted that the EF have asked for the annual IP check for releases to ensure due process is being followed.
 - ii. PMC lead will address the required information in due course.

- iii. Shelley advises that there will be a future requirement to demonstrate secure dev practices.
- Golang patch management demo (if we have time)
 - i. George shared some experience of how the Golang team in Microsoft manages patches to upstream code.
 - ii. Adoptium could benefit from having such explicit patch management rather than floating them directly in the dev branches of the source tree.

Meeting closed at 14:43 BST
