    - i. Upstream changed how man pages are being built.
    - ii. Tools are required at build time to build them. These are new dependencies, which are non-trivial.
    - iii. Need to decide how these are to be provided on the various build platforms.
    - iv. Should also check if there is an implication for reproducible builds. Unsure if these are in scope for the checks.
    - i. ACTION: Scott will figure out how the build environment needs to change to provide Linux man pages in the build. Will check on reproducible build implications.
