Adoptium
Project Management Committee
Agenda & Minutes

"The PMC as a whole, and the PMC leads in particular, are ultimately responsible for ensuring that the Eclipse Development Process is understood and followed by their Projects. The PMC is additionally responsible for maintaining the Top-Level Project's charter." [ref]

Date: 2024-September-25th

Agenda:
- Approval of minutes of the September 11th meeting.
- Approval of statement for the September 18th meeting.
- Review of outstanding actions.
- Review of GitHub issues flagged for PMC agenda
  - Support for aarch64 Windows platform (adoptium-support#616)
- Temurin v23 update
  - Release champion: Andrew Leonard
  - Release checklist (temurin#56)
  - Release status per Platform, Version & Binary Type (temurin#57)
- Docker Pro subscription plan status (Slack ref).
- Building and distributing container images.
- Update on GHSA-xrvg-mgj7-p5wh.
- Jenkins LTS update will require JDK17 which we do not have on Solaris
- AoB

Action items:

Date	Description	Status
2024-07-17	ACTION: Martijn to open an issue and describe the proposal to remove installer third-party branding code, allow third-parties to comment ahead of removal.	In progress

2024-09-04	ACTION: Tim to update Eclipse's default security team membership of Adoptium projects to be project leads only. PMC to agree on adding others as required.	In progress adoptium/adoptium#258

Attendees

- ☑ George Adams - joined at 14:08 BST
- ☑ Stewart Addison
- ☑ Carmen Delgardo (guest)
- ☑ Tim Ellison
- ☑ Scott Fryer
- ☑ Severin Gehwolf
- ☑ Shelley Lambert
- ☑ Andrew Leonard
- ☐ San Hong Li (apologies)
- ☑ John Oliver
- ☐ Martijn Verburg
- ☑ Lan Xia

Meeting called to order at 14:03 BST

Minutes:

- Approval of minutes of the September 11th meeting.
  - Minutes were approved.
- Approval of statement for the September 18th meeting.
  - Statement was approved.
- Review of outstanding actions.
  - Updates given.
- Review of GitHub issues flagged for PMC agenda
  - Support for aarch64 Windows platform (adoptium-support#616)
    - i. George is to handle assessment of build status.
    - ii. Does not need to be on the PMC agenda. Tag is removed.
    - iii. Awaiting compliance machine.
- Temurin v23 update
  - Release champion: Andrew Leonard
  - Release checklist (temurin#56)
  - Release status per Platform, Version & Binary Type (temurin#57)
  - Release is completed - thanks to all for their contributions.
  - Having EA access to the TCK materials and implementation tag was helpful in getting a prompt release.
  - Windows nano server container image not published due to a known bug there.

- - - i. Discussion of whether to ship with a known defect in 23.0.1, or cherry-pick the fix/wait for 23.0.2.
    - ii. Failure mode is a warning to the user. Will fall back to v22 behavior.
- Docker Pro subscription plan status ([Slack ref](#)).
  - Sxa was able to confirm that we have this subscription, and prices are going up.
  - Discussion underway with EF infra about the position.
  - The pro subscription is to get the rate limit removed for build bots.
- Building and distributing container images.
  - Discussion of utilising alternate container image repositories for both our own usage of Dockerhub and that being the only location for users to get Temurin images.
  - The images are created using Bashbrew scripts and Jenkins pipelines that are open source, meaning we can reuse them to an alternate location.
  - Note that this would result in images with the same logical content but different SHAs.
    - i. This is unlikely to be a problem or cause confusion for end users - but should be noted.
  - We still push some end user images to the old project location, but that location will probably be discarded in the future, and users should be migrating to the new images.
  - Plan to let the subscription renew to allow for a transition timescale.
  - ACTION: Raise an issue to describe a proposed change to image creation, covering both existing official Docker images and project created images via an alternate location (to be determined).
- Update on GHSA-xrvg-mgj7-p5wh.
  - None this week.
- [Jenkins LTS update will require JDK17](#) which we do not have on Solaris
  - The Jenkins LTS available at the end of next month will require JDK17.
  - This is required for both client and server sides of Jenkins.
  - Need to check if JDK17 is required for functionality that we don't use, or an integral part of the core requirement. While most platforms have a JDK17 this will be problematic on Solaris 10.
  - Potentially check if it runs with a Solaris 11 JDK17 - available [elsewhere](#).
  - Consider other options such as virtualising the build agent on Solaris.
  - Infra to create an issue and discuss options. Bring any issues back to PMC if required.
- AoB
  - Website update
    - i. Homepage technical update is in place.
    - ii. Looking to work on a migration plan to have some pages available from the new site, and some from the old.
      1. Potential that CloudFlare can provide the required capability.
    - iii. Still requires work required on the content - text and diagrams, i18n, etc.
    - iv. Need to be mindful of the principal paths on the website - the home page and Temurin download pages. Others may be enhanced by some first time contributors.

v. PMC happy for progressing the CloudFlare approach to rollout. Need to get approval from the WG if there are additional costs.

Meeting closed at 14:54 BST
