Minutes:

Meeting start time 14:05

- The [minutes](#) from the April 29, 2026 meeting are approved.
- Review of outstanding actions.
- Review of GitHub [issues](#) and [discussions](#) flagged for PMC agenda
- Release update
 - ~10 platforms left to go
 - Dockerfile updates to include Ubuntu resolute (26.04), though does not have riscv64 for now (insert link to issue here)
 - Temurin-compliance committers creating a plan for actions between now and July to ensure the project remains stable and can continue to operate well.
- Mirror containers on ghrc proposal
 - Push/pull, same digest, prototyped in <https://github.com/gdams/containers/pkgs/container/eclipse-temurin>
- 1Q 2026 High Impact Contributions review
 - Shelley to trial agentic workflow to summarize quarterly activities and prepare a document for PMC review per quarter, offloading some human effort and also to ensure regular review
- AoB
 - [CVE-2026-31431](#) Copy-fail work by Scott is ongoing, <https://github.com/adoptium/infrastructure/issues/4336>, auto-patching has mostly work, some SLES/15 boxes will have a mitigation applied until they are upgraded fully

- Netlify deploy servers were being hammered maliciously, mitigation in place to lock the deploy previews behind a login. Bandwidth is now under control. George and Chris Guindon from EF, have visibility and will monitor.
- Azure Windows Dynamic images will be put online shortly. X64 Mac agents from the GHA plugin were used during the release, a handful of networking tests do not pass on them, but generally most testing does well on them. Will look at trialing other platforms that are available from GHA.
